Luis ESp — Confirmed Duplicated Trades (August 4, 2026)

User: Luis ESp — dd18ad68-cab1-4d02-8bd8-6d975db5f959 **Complaint:** "my **single trades** are being duplicated" — one trade signal opening as many identical copies **Purpose:** verify each group below against the app / broker statements. **How to verify:** each group = ONE Telegram signal that should have opened ONE trade, but opened N. Every copy has its own broker ticket (distinct `metaapi_order_id`).

All times are UTC.

What does "Duplicates: 34" mean?

A Telegram signal = **1 instruction** = should open its planned trades **once**.

- **"Duplicates: 34"** = that ONE signal's plan ran **twice**. The account is set to multi/range, so the plan itself is 17 orders (tp1...tp17) — but the SAME 17-order plan was executed again ($17 + 17 = 34$). You will see every planned trade twice in the app.
- **"Duplicates: 3"** = that ONE signal's plan ran **three times**. Here the plan was a single 0.41-lot order — but it was sent 3 times (3 identical orders instead of 1).

The number is just **how many copies were created from that single signal**. Running the plan once is normal — running it again is the duplication.

1. August 4, 2026

Time: 11:52:43 UTC **Signal:** 906a4b64-aae8-4dcc-a72c-42c29df42b99 **Channel:** 44Fx (channel lost in DB) **Signal message:** "Gold Sell Now!" **Trade style:** Multi (account "MT5 Demo for 1 Chanel") **Duplicates:** 34 — **CONFIRMED Proof of duplication:** the 34 broker order comments are

TScopier:44Fx:906a4b64:tp1 ... tp17 followed by the **exact same sequence again** (tp1 ... tp17) — the identical 17-order plan was executed **twice**. 34 distinct broker tickets, one order every ~0.37s, all with identical lot 0.03 / SL 4093 / TP 4073. **What happened in the channel:** the channel posted "Gold Sell Now!" once (msg #17284) and edited it 2 seconds later (11:52:40, per Telegram's edit date). The system then re-checked the message at +10s and +30s (settle poll), found the text had changed from what it stored, and treated it as a new dispatch each time:

```
11:52:38 message posted → dispatch #1 → 17 orders (tp1...tp17)
11:52:40 channel edits the message (real edit date)
11:52:49 settle poll (+10s): message text changed
11:52:52 revision applied → dispatch #2 → 17 more orders (tp1...tp17) = 34 total
11:53:09 settle poll (+30s): changed again
11:53:12 revision applied but DEDUPED (only 1 dispatch slipped through)
```

2. August 4, 2026

Time: 13:41:33 UTC **Signal:** ead1ebb8-9709-4136-98ab-5a22963eebfcd **Channel:** 44's Club **Signal message:** "Gold Buy Now!" **Trade style:** Multi/range account ("FTMO USD 100K funded") — BUT the 3 orders are the SAME single-entry plan executed 3 times (identical lot 0.41, SL 4077, TP 4097, comment TScopier:44sClub:ead1ebb8 with NO :tpn layer suffix — a real range plan would vary lots/prices per layer) **Duplicates:** 3 — **CONFIRMED** —  **now closed** (all 3 closed together 2026-08-05 00:19:33 UTC, ~10h40m after opening) **Proof of duplication:** the account's own execution log shows THREE separate successful order_send actions for this ONE signal within 24 seconds — same volume 0.41, same comment, same SL/TP, 3 distinct broker tickets (281762049, 281762205, 281762266). One signal → three identical sends. **What happened in the channel:** the channel posted "Gold Buy Now!" once (msg #14238). The settle poll at +10s found the text changed (order #2), and the channel also **live-edited** the message 21 seconds after posting (13:41:51, per Telegram's own edit date) — the edit triggered order #3:

```
13:41:30 message posted          → order #1 (13:41:33, ticket 281762049)
13:41:43 settle poll (+10s): message text changed
13:41:47 revision applied        → order #2 (13:41:49, ticket 281762205)
13:41:51 channel EDITS the message (live edit, real edit date)
13:41:56 revision applied        → order #3 (13:41:57, ticket 281762266)
13:42:06 settle poll (+30s) revision → DEDUPED (no 4th order)
```
